

MAKING YOUR VISION FLOAT

GROOT  SHIP DESIGN

INTRODUCTION

Groot Ship Design is a creative design house rooted in the northern Netherlands shipbuilding industry, now operating globally.

With a hands-on mentality, we turn your dreams and visions into reality-checked concepts and profit-generating ships.

Our portfolio includes a wide range of commercial cargo vessels, from standard general cargo and bulkers to client-specific designs for heavy lift and project cargo, tankers, RORO, livestock carriers, and more.

We are at home in the rapidly changing world of green technologies and future legislation, working with you to find solutions tailored to your specific needs.

When it finally comes to turning your visions to life, Groot Ship Design works with shipyards around the world. Through detailed design and engineering packages, we help them turn your ideas into a full-scale floating reality.

DESIGN

At Groot Ship Design, we develop our vessels in close cooperation with clients – either shipowners or shipyards. Your specific demands are our starting point and guidance.

Your input, combined with our theoretical and practical experience, will result in your new, tailored design. Your future newbuildings will possess the specific benefits that secure the efficiency and operational flexibility with which you can maximize the potential of your business.

We offer designs for all types of cargo vessels: general cargo, bulkers, project and heavy lift cargo, containers, RORO, tankers... In addition, we have experience in special ship types such as livestock carriers, dredgers, special-purpose ships, offshore ships, etc.

STANDARDIZED OFF-THE-SHELF DESIGNS

Apart from tailor-made designs, Groot Ship Design also offers several off-the-shelf designs for more common ship types, which can be acquired for building at any location you prefer.

For example, the Groot XL series of minibulkers/MPV's have been built and are now in service for several ship owners. These efficient, simple and cost-effective designs have proven themselves in a short time span to be the new benchmarks in the market.

ENGINEERING

Besides designs, Groot Ship Design offers engineering packages and a wide variety of independent services.

Do you need assistance with basic or detailed 3D engineering, CAM information, vessel conversions, or technical consultancy?

We can assist you!
